HTML TAGS: WORKSHEET #4
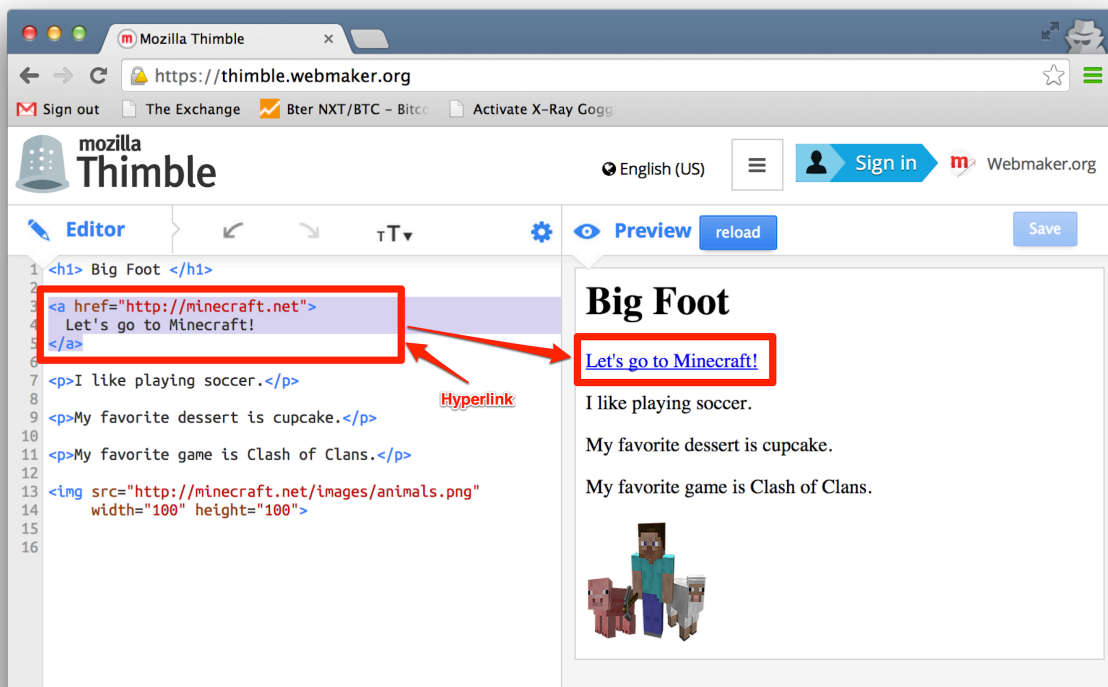

Links: anchor tag and href attribute

Hyperlink

- Let's create a link to the Minecraft website with the text "Let's go to Minecraft!"

  An hyperlink is created using the anchor tag <a>. The location of the web page where we want to go is specified with the href, in our case the value is: http://minecraft.net

  ```
  <a href="http://minecraft.net">
    Let's go to Minecraft!
  </a>
  ```

  The text "Let's go to Minecraft" must be included between the <a> and tags. The hyperlink text will show up as underlined text by default.

- Let's create a link to the Minecraft website using an image

```
<a href="http://minecraft.net">
  <img src="http://minecraft.net/images/animals.png"
     width="100" height="100">
</a>
```

- Let's create a link to the Minecraft website using the text "Let's go to Minecraft!" and an image

```
<a href="http://minecraft.net">
    Let's go to Minecraft
    <img src="http://minecraft.net/images/animals.png"
    width="100" height="100">
</a>
```
